Just a caveat before I begin. I had been writing metrical verse for some years before purchasing this book. I was familiar with the author because of his years as editor of The Formalist. I happened to come across this book while browsing at . Intrigued by its title and author, I purchased it, hoping to gain some very detailed insight and advice about the mechanics of writing metrical poetry. Instead,

what I received was a defense of the practice of formalism in an age dominated by free verse, a rather basic introduction to scansion and metrical substitution, followed by definitions and examples of blank verse, ballad stanzas, the sonnet and the French forms such as the villanelle and the triolet. Baer's manual offers exercises for the poet, but no way to grade them or evaluate them. The exercises offered are very general, such as "write a sonnet, using either the Italian or English format. Use only pentameters and solid rhymes. Avoid the pop culture. Avoid old-fashioned diction. Avoid convoluted syntax that's manipulated to hit the rhymes." What is the reader to do when she/he has already written 60 or 70 sonnets? The book purposely avoids technical language. You won't learn of anacoluthon, asyndeton, synaeresis, aposiopesis, sczons, rima bacciata, apocope, syncope, acatalexis, acephalexis or similar terms. In short, it is a strictly introductory level book, probably intended for the poet who has been dabbling in free verse and who wishes to try her/his hand at formalism, but has very little experience with traditional poetic forms.
